Experience

IT Project Management Intern (Bank of Ceylon Head office - BOC Flex Project)

Colombo, Western Province, Sri Lanka · On-site - 6 months

- Collaborated in the development and deployment of the BOC Flex mobile application, supporting both business and technical teams.
- Contributed to documentation processes including meeting minutes, functional specifications, and user requirement notes to support project delivery.
- Performed manual UI testing to identify usability issues in the BOC Flex mobile app to ensure usability and consistency.
- Supported issue tracking and stakeholder communication to ensure smooth project delivery.
- Conducted manual testing of Bill Payment features, ensuring functionality and reliability prior to live release.
- Created and executed detailed test cases for Bill Payment functions to uphold quality standards.
- Managed JIRA tickets and coordinated with IT and Development teams to resolve UAT and production issues.
- Contributed to the CEFTS (Common Electronic Fund Transfer Switch) platform update project by handling JIRA issues and facilitating collaboration between developers and the business team.

Operation Officer (Executive Level 4) - Port City Digital Pvt Ltd

Colombo, Western Province, Sri Lanka · On-site - 3 months

- Efficiently managed multiple operational tasks, data processing, and back-office workflows within a high-volume, fast-paced BPO environment. Collaborated closely with cross-functional teams to troubleshoot daily issues, streamline workflows, and consistently maintain high performance under demanding shifts.

Projects

Sri Lankan tour booking application for tourists

Ongoing real-world application for Tourism company. For this application, I have used MERN stack & also added Admin panel to manage tour packages & tours easily.

Wearable IoT Health Monitoring Device - (IoT Arduino Project)

Designed and developed an IoT watch using ESP32, MPU6050, OLED display, and Wi-Fi for patient monitoring, with data visualization and control using Node-RED. This watch can detect real-time steps, heart rate and body temperature of the person.
